

## GENERAL.

May was also very dry and sunny and would have been almost quite dry but for the period of rain from the 11th to the 18th, the thunderstorm of the 16th, with the associated heavy rain, making this day prove to be the wettest day of the year 1936.

June was, of course, outstanding owing to the total eclipse of the sun on the 19th, and this was admirably seen from Bute from 4.40—6 hrs. 9 m. The existence of the phase of the sun-spot cycle was undoubtedly responsible for the sultry conditions which were experienced during the latter days of the month.

July was very wet, the fall for the month being nearly 2 ins. more than that of a normal year, and nearly 3 ins. more than that of last year. Sunshine was also markedly deficient during the month. August proved to be a very quiet month, although the movement of a depression across Scotland maintained rain in western districts for the greater part. September started with seven wet days, then a period of thick fog ending with a thunderstorm on the 14th, but the latter half of the month was very dry.

October started with an anticyclone centred over Scotland, and this gave us 11 fine dry days, barometer readings being very high. This soon changed, however, with the coming of the strong gales, which did much damage all over the Island of Bute, and gales were recorded on eight of the latter 16 days of the month.

Regarding rainfall, the period 10th October 19th November calls for particular mention, since during these 40 days Rothesay had not one day dry. After this, November was mainly dull, with fog continuing from the 19th till the 27th November. December has one outstanding feature, and members should think carefully for a few moments on what this really means. The three successive weeks ending on Saturdays, 12th, 19th and 26th, were entirely sunless, or expressed in other words, Rothesay during December did not have a blink of sun for 21 days.

**THUNDERSTORMS.**—The number of thunderstorms during 1936 was five more than the average number, which is seven.

**TOTAL RAINFALL.**—The total fall for 1936 was 49.79 ins., and this is 3.87 ins. less than during 1935, yet the total number of wet days for 1936 is 266, which shows that 24 more days were wet in 1936 than during 1935. The wettest day of the year was 16th May, when 1.49 ins. fell during the 24 hours.
